M: It's my last day at work tomorrow. I'll start my new job in two weeks. My human resources manager wants to conduct an interview with me before I leave.

W: To my way of thinking, there are two main potential benefits that come from unleashing an agitated stream of truth during an exit interview. The first is release. Unburdening yourself of frustration, and perhaps even anger to someone who isn't a friend or close colleague can be wonderfully freeing.

W: 在我看来，在离职面谈时把一股激动的真实想法倾泻出来，可能有两个主要好处。第一个是释放。把自己的挫败感，甚至愤怒，倾诉给一个既不是朋友也不是关系亲密的同事的人，可能会让你感到如释重负。

M: And let me guess. The second is that the criticism will, theoretically, help the organization I'm leaving to improve, making sure employees of the future are less likely to encounter what I did?

p-1-6 原文

W: That's right. But the problem with the company improvement part is that very often it doesn't happen. An exit interview is supposed to be private, but often isn't. In my company, the information gained from these interviews is often not confidential. And the information is used as dirt against another manager, or can be traded among senior managers.

W: 没错。但公司改进这一点的问题在于，很多时候它并不会发生。离职面谈本应是私下进行的，但往往并不是。在我所在的公司，从这些面谈中获得的信息通常并不保密。这些信息会被用来攻击另一位经理，或者在高层经理之间互相交换。

Questions 9 to 11 are based on the passage you have just heard.

p-9-1 原文

Scientists often use specialized jargon terms while communicating with laymen. Most of them don't realize the harmful effects of this practice. In a new study, people exposed to jargon when reading about subjects like autonomous vehicles and surgical robots later said they were less interested in science than others who read about the same topics, but without the use of specialized terms. They also felt less informed about science and less qualified to discuss science topics. It's noteworthy that it made no difference if the jargon terms were defined in the text. Even when the terms were defined, readers still felt the same lack of engagement as readers who read jargon that wasn't explained.

科学家在与非专业人士交流时，常常使用专业术语。他们中的大多数人没有意识到这种做法会产生有害影响。一项新的研究显示，在阅读有关自动驾驶汽车和手术机器人等主题的内容时接触到专业术语的人，后来表示自己对科学的兴趣低于阅读相同主题但未使用专业术语的人。他们还觉得自己对科学的了解更少，也没有足够的资格讨论科学话题。值得注意的是，专业术语是否在文中得到定义并没有造成任何差异。即使这些术语得到了解释，读者仍然感到自己与内容缺乏联系，就像那些阅读了未加解释的专业术语的读者一样。

查看该段公开来源

p-9-2 原文

The problem is that the mere presence of jargon sends a discouraging message to readers. Hillary Schulman, the author of the study, asserts that specialized words are a signal. Jargon tells people that the message isn't for them.

问题在于，专业术语的存在本身就会向读者传递一种令人气馁的信息。该研究的作者希拉里·舒尔曼认为，专业词汇是一种信号。专业术语会告诉人们，这条信息不是为他们准备的。

查看该段公开来源

p-9-3 原文

There's an even darker side to how people react to jargon. In another study, researchers found that reading scientific articles containing jargon led people to doubt the actual science. They found the opposite when a text is easier to read. Then people are more persuaded.

人们对专业术语的反应还有更为严重的一面。在另一项研究中，研究人员发现，阅读含有专业术语的科学文章会使人们怀疑科学本身。当文本更容易阅读时，他们发现的结果则恰恰相反。这样一来，人们会更容易被说服。

p-9-4 原文

Thus, it's important to communicate clearly when talking about complex science subjects. This is especially true with issues related to public health, like the safety of new medications and the benefits of vaccines. Schulman concedes that the use of jargon is appropriate with scientific audiences. But scientists who want to communicate with the general public need to modify their language. They need to eliminate jargon.

因此，在谈论复杂的科学主题时，清晰地进行交流非常重要。涉及公共卫生的问题尤其如此，例如新药的安全性和疫苗的益处。舒尔曼承认，在面向科学界人士时使用专业术语是恰当的。但希望与公众交流的科学家需要调整自己的语言。他们需要消除专业术语。

At the beginning of the twentieth century, on the Gulf Coast in the US state of Texas, there was a hill where gas leakage was so noticeable that schoolboys would sometimes set the hill on fire.

二十世纪初，在美国得克萨斯州的墨西哥湾沿岸，有一座山丘，那里天然气泄漏十分明显，以至于学生们有时会把山丘点燃。

p-12-2 原文

Pattillo Higgins, a disreputable local businessman, became convinced that there was oil below the gassy hill. Oil wells weren't drilled back then;

they were essentially dug. The sand under the hill defeated severalattempts by Higgins' workers to make a proper hole. Higgins had forecastoil at 1,000 feet, a totally made-up figure.

帕蒂洛·希金斯是一名声名狼藉的当地商人，他确信这座冒气的山丘下方有石油。那时还没有钻探油井；油井基本上是挖出来的。山丘下的沙土使希金斯的工人几次试图挖出合适井孔的努力都以失败告终。希金斯预言一千英尺深处会有石油，这个数字完全是凭空捏造的。

Higgins subsequently hired a mining engineer, Captain Anthony Lucas. After encountering several setbacks, Captain Lucas decided to use a drill, and his innovations created the modern oil drilling industry.

随后，希金斯聘请了一名采矿工程师安东尼·卢卡斯上尉。在经历了几次挫折后，卢卡斯上尉决定使用钻机，他的创新创造了现代石油钻探业。

In January 1901, at 1,020 feet-almost precisely the depth predicted by Higgins' wild guess-the well roared and suddenly ejected mud and six tons of drilling pipe out of the ground, terrifying those present. For the next nine days, until the well was capped, the well poured out more oil than all the wells in America combined.

1901年1月，在一千零二十英尺深处--几乎正是希金斯那个荒唐猜测所预言的深度--油井发出轰鸣，突然将泥浆和六吨钻管从地下喷出，把在场的人吓坏了。在接下来的九天里，直到油井被封住为止，它涌出的石油超过了美国所有油井产量的总和。

p-12-5 原文

In those days, Texas was almost entirely rural, with no large cities and practically no industry; cotton and beef were the foundation of the economy. Higgins' well changed that. The boom made some prospectors millionaires, but the sudden surplus of petroleum was not entirely a blessing for Texas. In the 1930s, prices crashed, to the point that in some parts of the country oil was cheaper than water. That would become a

familiar pattern of the boom-or-bust Texas' economy.

那时，得克萨斯州几乎完全是农村地区，没有大城市，实际上也没有工业；棉花和牛肉是经济的基础。希金斯的油井改变了这一切。这场繁荣使一些勘探者成为百万富翁，但石油突然过剩对得克萨斯州而言并不完全是福音。到了20世纪30年代，油价暴跌，在美国一些地区，石油甚至比水还便宜。这后来成为得克萨斯州经济繁荣或萧条的一个常见模式。

Questions 16 to 18 are based on the recording you have just heard.

p-16-1 原文

Most people dislike their jobs. It's an astonishing but statistical fact. A primary cause of employee dissatisfaction, according to fresh research, is that many believe they have terrible managers. Few describe their managers as malicious or manipulative though. While those types certainly exist, they are a minority. The majority of managers, seemingly, just don't know any better. They are often emulating bad managers they've had in the past. It's likely they've never read a management book or attended a management course. They might not have even reflected on what good management looks like and how it would influence their own management style.

大多数人不喜欢自己的工作。这是一个令人惊讶却有统计数据支持的事实。根据最新研究，员工不满的一个主要原因是，许多人认为自己的经理非常糟糕。不过，很少有人把自己的经理描述为恶意或善于操纵他人的人。虽然这类人确实存在，但他们只是少数。显然，大多数经理只是缺乏更好的管理方法。他们往往是在模仿自己过去遇到过的糟糕经理。他们很可能从未读过管理类书籍，也没有参加过管理课程。他们甚至可能从未认真思考过良好的管理应该是什么样，以及良好的管理会如何影响自己的管理风格。

The researchers interviewed employees about their managers, beginning with a question about the worst manager they had ever had. From this, the researchers came up with four main causes of why some managers are perceived as being simply awful at their jobs.

研究人员就经理的表现采访了员工，首先询问他们曾经遇到过的最糟糕的经理。根据这些访谈，研究人员归纳出一些经理被认为工作能力极差的四个主要原因。

查看该段公开来源

p-16-3 原文

The first cause was company culture, which was seen by employees as enabling poor management practices. It was specifically stressful work environments, minimal training and a lack of accountability that were found to be the most blameworthy. Often a manager's superiors can effectively encourage a manager's distasteful behavior when they fail to discipline the person's wrongdoings. Such workplaces are sometimes described as toxic.

第一个原因是企业文化，员工认为企业文化助长了糟糕的管理方式。研究发现，最应受指责的具体因素是压力很大的工作环境、极少的培训以及缺乏问责。经理的上级在未能惩处经理的不当行为时，往往实际上是在助长这种令人反感的行为。这类工作场所有时被称为有毒的工作环境。

p-16-4 原文

The second cause was attributed to the managers' characteristics. Those deemed to be most destructive were odd people-those without drive, those who allow personal problems into the workplace, and those with an unpleasant temperament or personality in general.

第二个原因归结于经理自身的特点。被认为最具破坏性的是一些古怪的人--缺乏进取心的人、把个人问题带入工作场所的人，以及总体上脾气或性格令人不快的人。

The third cause of poor management was associated with a deficiency of qualifications not so much the formal variety one obtains from a university, but the informal variety that comes from credible work experience and professional accomplishments.

管理不善的第三个原因与资历不足有关，这里的资历并不主要指从大学获得的正式学历，而是指通过可信的工作经历和职业成就积累起来的非正式资历。

p-16-6 原文

The fourth cause concerned managers who've been promoted for reasons other than potential. One reason in particular why these people had been promoted was that they had been around the longest. It wasn't their skill set or other merits that got them the job; it was their tenure.

第四个原因涉及那些因潜力以外的理由而获得晋升的经理。其中一个特别的原因是，他们在公司待的时间最长。让他们得到这份工作的并不是他们的技能或其他优点，而是他们的任职年限。

p-16-7 原文

A point worth making is that the study was based only on the perspective of employees. The researchers didn't ask senior leaders what they thought of their frontline managers. It's quite possible they're content with how the individuals they promoted are now performing, merrily ignorant of the damage they're actually causing, which might explain why, as the researchers conclude, those same middle managers are usually unaware that they are a bad manager.

值得指出的是，这项研究仅基于员工的视角。研究人员没有询问高层领导如何看待他们的一线经理。他们很可能对自己提拔的人如今的表现感到满意，却完全没有意识到这些人实际上造成的损害；这或许可以解释为什么研究人员得出结论认为，那些同样的中层经理通常并不知道自己是一名糟糕的经理。

Iron ore is a key ingredient in steel-making. The mining companies here produce almost 300 million tons of iron ore a year. The 240 giant autonomous trucks in use, in the Western Australian mines, can weigh 400 tons, fully loaded, and travel at speeds of up to 60 kilometers per hour. They are a technological leap, transporting iron ore along routes which run for hundreds of kilometers from mines to their destinations. Here when the truck arrives at its destination, staff in the operation center direct it precisely where to unload. Vast quantities of iron ore are then transported by autonomous trains to ocean ports.

A range of factors has pushed Western Australia's desert region to the lead of this automation revolution. These include the huge size of the mines, the scale of equipment and the repetitive nature of some of the work. Then there's the area's remoteness. At 502,000 square kilometers, it can sometimes make recruiting staff a challenge. Another consideration is the risks when humans interact with large machinery. There are also the financial imperatives. The ongoing push by the mining corporations to be more productive and more efficient is another powerful driver in embracing automation technology.

多种因素推动西澳大利亚的沙漠地区走在这场自动化革命的前沿。这些因素包括矿山规模庞大、设备规模巨大，以及部分工作具有重复性。此外，还有该地区地处偏远这一因素。这里面积达50.2万平方公里，有时会使招聘员工成为一项挑战。另一个需要考虑的因素是人类与大型机械互动时所面临的风险。此外还有财务方面的迫切需求。矿业公司持续推动提高生产率和效率，也是其积极采用自动化技术的另一个强大动力。

Workers’ unions have accepted the inevitability of the introduction of new technology. But they still have reservations about the rise of automation technology. And this may well prove to be the most significant impact of robotic technology in many places around the world.

Globally, road accidents kill more people every year than any infectious disease. Researchers at the Institute for Health Metrics and Evaluation in America put the death toll in 2017 at 1.24 million. According to the institute, the overall number of deaths has been more or less static since the turn of the century. But that disguises a lot of changes in individual countries.

在全球范围内，道路事故每年造成的死亡人数超过任何一种传染病。美国健康指标与评估研究所的研究人员估计，2017年的死亡人数为124万。据该研究所称，自本世纪初以来，死亡总人数基本保持不变。但这一数字掩盖了各个国家发生的诸多变化。

In many poor countries, road accidents are killing more people than ever before. Those countries have swelling, young populations, a fast-growing fleet of cars and motorbikes, and a limited supply of surgeons. It is impossible to know for sure because official statistics are so inadequate, but deaths are thought to have risen by 40% since 1990 in many low-income countries. In many rich countries, by contrast, roads are becoming even

safer. In Estonia and Ireland, for example, the number of deaths has fallenby about two-thirds since the late 1990s.

在许多贫穷国家，道路事故造成的死亡人数比以往任何时候都多。这些国家人口不断增长且较为年轻，汽车和摩托车数量快速增加，而外科医生数量有限。由于官方统计数据严重不足，无法确切得知实际情况，但据认为，许多低收入国家的死亡人数自1990年以来增加了40%。相比之下，在许多富裕国家，道路正变得更加安全。例如，在爱沙尼亚和爱尔兰，死亡人数自20世纪90年代末以来减少了约三分之二。

The question is whether Thailand can soon follow suit.

Rob MeInerney, head of the International Road Assessment Programme, says that all countries tend to go through three phases. They begin with poor, slow roads. In the second phase, as they grow wealthier, they pave the roads, allowing traffic to move faster and pushing up the death rate. Lastly, in the third phase, countries act to make their roads safer. The trick, then, is to reach the third stage sooner, by focusing earlier and more closely on fatal accidents.

International Road Assessment Programme负责人Rob MeInerney表示，所有国家往往都会经历三个阶段。第一阶段是道路状况差、通行速度慢。第二阶段，随着国家变得更加富裕，道路得到铺设，车辆行驶速度加快，死亡率也随之上升。最后，在第三阶段，各国采取措施提高道路安全性。因此，关键在于更早、更集中地关注致命事故，从而尽快进入第三阶段。

How to do that? The solution lies not just in better infrastructure, but in better social incentives. Safe driving habits are practices which people know they should follow but often don't. Dangerous driving is not a fixed cultural trait, as some imagine. People respond to incentives, such as traffic laws that are actually enforced.

如何做到这一点？解决办法不仅在于改善基础设施，也在于建立更好的社会激励机制。安全驾驶习惯是人们知道自己应该遵守、却常常不去遵守的行为规范。危险驾驶并不是某些人所认为的那种固定的文化特征。人们会对激励措施作出反应，例如真正得到执行的交通法规。

But I think when we get feedback from someone we trust, we understand that the feedback isn't some kind of personal attack. It's actually a kind of support because it's offered in the spirit of helping us improve. I think sometimes people need to shift their mindsets around how they receive feedback.

W: It seems you suffer from "Fear of Better Options." I've read about it. It describes this loop of indecision as part of our programming. Essentially, we have this tendency to keep stretching out the decision-making process, because as human beings, we are hard-wired to optimize. We have always looked to get the best things we can as a sort of survival of the fittest. Optimizing isn't the problem, but rather the process that we go through.

W: 看来你患有“更好选择恐惧症”。我读过相关的内容。它把这种优柔寡断的循环描述为我们思维机制的一部分。从本质上说，我们总是倾向于不断延长决策过程，因为作为人类，我们天生就会追求最优选择。一直以来，我们都在努力获得能得到的最好东西，这可以说是一种适者生存。追求最优并不是问题，问题在于我们所经历的过程。

The most toxic part of decision making is going over the same options time and time again.

The role of homework in classrooms is not a new debate. Many parents and teachers are ardent supporters of homework. But do all students benefit from homework? A 2006 research paper suggested some correlation between the amount of homework done by a student and future academic achievement for middle and high school students but not so much for younger kids.

家庭作业在课堂教学中的作用并不是一个新争论。许多家长和教师都是家庭作业的热烈支持者。但所有学生都能从家庭作业中受益吗？2006年的一篇研究论文指出，对于初中和高中生而言，学生完成的作业量与未来的学业成就之间存在一定的相关性，但对于年龄更小的孩子来说则不然。

A Stanford study in 2014 suggested the same was true for students in California's affluent communities. The findings challenged the idea that homework was "inherently good." The researchers concluded that there was an upper limit to the correlation between homework and achievement, suggesting that high school students shouldn't be doing more than two hours of homework a night. And the most valuable kind of homework for elementary-level children was simply assigned free reading.

2014年斯坦福大学的一项研究表明，加利福尼亚州富裕社区的学生也是如此。研究结果挑战了家庭作业“本质上是有益的”这一观念。研究人员得出结论，家庭作业与学业成就之间的相关性存在上限，并建议高中生每晚做家庭作业的时间不应超过两小时。而对于小学阶段的孩子来说，最有价值的家庭作业仅仅是布置的自由阅读。

At age 27, Goddard published his first book in which he hypothesized that a rocket launched from Earth could reach the Moon. Like many visionaries, the young scientist encountered numerous skeptics. In January 1920, The New York Times ridiculed Goddard's theory that rockets could be utilized for space exploration. Forty-nine years later, Apollo 11 reached the Moon and the famed newspaper published an apology to Goddard.

然而，这位雄心勃勃的科学家几乎没有得到政府的支持。四年来，富有的商人丹尼尔·古根海姆每年向戈达德提供2.5万美元的资助，以支持他追逐梦想。其他火箭爱好者也为他筹集资金。随着时间的推移，戈达德的火箭变得越来越复杂，并增设了各种仪器。

Despite the huge investment into research, ageing remains somewhat obscure, although there are certain things researchers do understand. They know that women tend to have longer lifespans, living on average six years longer

than men. No one is really certain of the reason for this, although thespeculation centers around the idea that women are more capable ofsurviving or handling disease than men. For virtually every disease, theeffects are greater on men than they are on women.

Researchers also know, to an extent, what causes ageing. For 60 years, it was believed that cells would continue to divide forever. It was only uncovered in relatively recent times that older people's cells divide a smaller number of times than younger people's. Only cancer cells, in fact, are capable of dividing forever. Human cells have a limited reproductive ability. To an extent, we can postpone the eventual stop of cells' dividing, through nutrition, exercise, good sleep, and even relaxation techniques. But we cannot stop the ageing process.

研究人员也在一定程度上了解衰老的原因。在长达60年的时间里，人们一直认为细胞会不断分裂下去，永远不会停止。直到相对较近的时期，人们才发现，老年人的细胞分裂次数少于年轻人的。事实上，只有癌细胞能够无限分裂。人体细胞的繁殖能力是有限的。在一定程度上，我们可以通过营养、锻炼、良好的睡眠，甚至放松技巧，推迟细胞最终停止分裂的时间。但我们无法阻止衰老过程。

In the opinion of some of the world's best scientific minds on the subject, part of the reason we don't yet have an answer is because many researchers are looking in the wrong direction. Many public health policy makers believe that the resolution of age-associated disease will tell us something fundamental about the ageing process, but say some top scientists, that's completely erroneous. They point to when the diseases of childhood were eliminated, but this did not provide any insight into childhood development. In the same way, the idea that the resolution of age-associated disease like heart disease and stroke will inform us about ageing is not based on sound science or logic.

在该领域一些世界顶尖科学家的看法中，我们至今尚未找到答案，部分原因在于许多研究人员的研究方向错了。许多公共卫生政策制定者认为，解决与年龄相关的疾病将使我们了解衰老过程中的某些根本问题，但一些顶尖科学家说，这种看法完全错误。他们指出，儿童期疾病被消除之后，并没有因此让人们对儿童成长发育有任何深入了解。同样，认为解决心脏病和中风等与年龄相关的疾病就能让我们了解衰老，这一想法没有坚实的科学或逻辑依据。

Much to their frustration, managers often struggle to get their staff to comply with even simple instructions. Often they blame their employees: "They don't read emails, they don't listen, they don't care"-that kind of thing. But according to recent research conducted in Australia, it looks like it's not the employees' fault but the managers'.

令管理者深感沮丧的是，他们常常难以让员工遵守哪怕是简单的指示。他们往往把责任归咎于员工："他们不读邮件，不听指示，也不在乎--诸如此类。"但根据澳大利亚近期开展的一项研究，问题似乎不在员工，而在管理者。

p-22-3 原文

It's easy to understand why people sometimes disobey procedures intentionally. Occasionally, it's because they're pressured to finish in a short time. At other times, they may disagree with the spirit of the procedure, the effort demanded, the time consumed, the lack of potential effectiveness. And every now and then, they just don't want to, maybe deliberately or out of stubbornness.

人们有时会故意不遵守程序，这一点很容易理解。有时是因为他们受到压力，必须在很短的时间内完成工作。另一些时候，他们可能不同意程序的宗旨，或认为程序要求付出的努力太多、耗费的时间太长，或者潜在的成效不足。还有些时候，他们只是不想遵守，可能是故意如此，也可能是出于固执。

查看该段公开来源

p-22-4 原文

So apart from that, what else gets in the way of procedural compliance? The research scholars surveyed 152 blue-collar workers from two separate sites

in the mining industry. They asked the workers a range of procedure-relatedquestions, such as whether they found the procedures useful, how confidentthey felt in their job, how comfortable they were to speak up in theworkplace, and how closely they followed any new procedures set by theirmanagers. They were also asked to rate the extent to which they perceivedtheir supervisors to be helpful.

那么，除此之外，还有什么因素会妨碍人们遵守程序呢？研究人员对采矿业两个不同工作地点的152名蓝领工人进行了调查。他们向工人提出了一系列与程序有关的问题，例如他们是否认为这些程序有用、对自己的工作有多大信心、在工作场所发言时是否感到自在，以及他们在多大程度上遵循管理者制定的任何新程序。他们还被要求评价自己认为主管在多大程度上能够提供帮助。

查看该段公开来源

p-22-5 原文

That last statement was the most instructive because, as the researchers found, there was a remarkably strong correlation between how helpful supervisors were perceived to be and how likely their employees were to follow their directives. Supervisors' helping behavior was found to be motivational in nature. It increased employees' perception of the likelihood of success in the attainment of job goals, and therefore fostered a willingness to dedicate their effort and ability to their work.

最后一点最能说明问题，因为研究人员发现，人们认为主管是否乐于提供帮助，与员工是否愿意遵循主管的指示之间存在显著的强相关性。研究发现，主管的帮助行为具有激励作用。这种行为提高了员工对实现工作目标成功可能性的认识，因此促使他们愿意将自己的努力和能力投入工作。

p-22-6 原文

In short, managers should be ongoing role models for the change. As the saying goes: "Do as I do, not as I say". To affect behavioral change, what's most required is interaction and involvement-the human touch-and, naturally, processes that add value. Although procedures are designed to guide and support employees' work, employees, it seems, can't always be expected to comply with procedures that are not seen as useful. And of course, managers shouldn't keep resending emails. They're an effective tool

for the sharing of data and reports, but they're a hopeless tool if what amanager is desiring is a change in behavior.

简而言之，管理者应当持续以身作则，推动变革。正如俗话所说："照我做，而不是照我说的做。"要促进行为改变，最需要的是互动和参与--人与人之间的沟通--当然还需要能够创造价值的流程。虽然程序旨在指导和支持员工的工作，但看来，我们不能总是期待员工遵守那些被认为没有用处的程序。当然，管理者也不应一遍遍地重新发送邮件。邮件是分享数据和报告的有效工具，但如果管理者想要改变员工的行为，邮件就完全不起作用了。

Questions 9 to 11 are based on the passage you have just heard.

p-9-1 原文

Whether it's in the hands of animated polar bears or Santa Claus, there's one thing you'll find in nearly all ads for Coca-Cola: the characteristic glass bottle. Most Americans don't drink soda out of the glass bottles seen in Coke's ads anymore. But this week, the company is celebrating a century of the bottle that's been sold in more than 200 countries.

无论是由动画片中的北极熊还是圣诞老人拿着，在几乎所有可口可乐的广告中，你都会看到同一样东西：那只独具特色的玻璃瓶。如今，大多数美国人已经不再用可口可乐广告中出现的玻璃瓶喝汽水了。但本周，这家公司正在庆祝这种已在全球200多个国家销售的瓶子问世一百周年。

Flash back to 1915, when a bottle of Coca-Cola cost just a nickel. As the soft drink gained in popularity, it faced a growing number of competitors-counterfeits even trying to copy Coke's logo. So, according to Coca-Cola historian Ted Ryan, the company decided to come up with packaging

that couldn't be duplicated.

回到1915年，那时一瓶可口可乐只要5美分。随着这种软饮料越来越受欢迎，它面临的竞争者也越来越多，甚至还有仿冒品试图复制可口可乐的标志。因此，据可口可乐历史学家特德·瑞安介绍，公司决定设计一种无法仿制的包装。

A product request was sent to eight different glass makers. Workers at the Root Glass Company got the request and began flipping through the encyclopedia at the local library, landing on cocoa seed. Though cocoa seed is not an ingredient of the soda, they designed their bottle based on the seed's shape and large middle. It won over Coke executives in Atlanta and would go on to receive its own trademark, spur collections and earn Coca-Cola an iconic image that made it part of American culture for a century.

公司向八家不同的玻璃制造商发出了一份产品设计要求。鲁特玻璃公司的工人收到要求后，开始在当地的图书馆翻阅百科全书，最后注意到了可可种子。虽然可可种子并不是这种汽水的原料，但他们根据种子的形状和中部较大的特点设计了瓶子。这一设计赢得了亚特兰大可口可乐公司高管的认可，后来还获得了自己的商标，推动了收藏热潮，并为可口可乐赢得了一个具有标志性的形象，使其在一个世纪里成为美国文化的一部分。

Why is this? Social anxiety appears to be the problem. People's reluctance to start conversations with nearby strangers comes partly from "underestimating others' interest in connecting". The sad thing is that people presume that a nearby stranger doesn't want to converse and don't start a conversation. Only those who forced themselves to chat because it was required by the experiment found out what a pleasant experience it could be.

The Caribbean islands are divided into two worlds, a rich one and a poor one. This tropical region's economy is based mainly on farming. Farmers are of two types. One is the plantation owner who may have hundreds of thousands of acres. In contrast, the small cultivator is working only a few acres of land. Most visitors to the Caribbean are rich, like the plantation owner. They do not realize or do not want to realize that many farm families barely managed to get by on what they grow.

The Caribbean produces many things. Sugar is the main product. Other export crops are tobacco, coffee, bananas, spices and citrus fruits, such as orange, lemon or grapefruit. From the West Indies also come oil, mineral pitch and many forest products. Jamaica's aluminum ore supplies are the world's largest. Oil comes from Trinidad, Aruba and Curacao. But for many of the smaller islands, sugar is the only export. Rum, a strong alcoholic drink, which is distilled from sugar cane, is also an export. The world's best rum comes from this area. Local kinds vary from the light rums of Puerto Rico to the heavier darker rums of Barbados and Jamaica. American tourists enjoy stocking up on inexpensive high quality Caribbean rum while they're on vacation. In Curacao, the well-known liquor of that name is made from the thick outer skin of a native orange.

As in most places, those who have money live well indeed. Those who don't have money live at various levels of poverty. But here the poor greatly outnumber the wealthy. A visitor will find rich people living in apartments or Spanish houses at the seaside or in the countryside. Their servants might include a cook, a maid, and a nurse for their children. Most of the people live well below the poverty level. In towns, they live crowded together in tiny houses. Islanders make the best they can of what they have. Their homes are quite shabby. Sadly, most tourists never see the side of the Caribbean.

p-19-1 原文

Talk to anyone who is a generation or two older, and they would most likely comment that children are more spoiled these days. No one wants to have or be around demanding, selfish and spoiled children, those who get bad-tempered or silently brood when they are not given everything they want immediately. Paradoxically, the parents of such children encourage this demanding behavior in the mistaken belief that by giving their children everything they can their children will be happy. In the short term, perhaps they are right. But in the longer term, such children end up lonely, dependent, chronically dissatisfied and resentful of the parents who tried so hard to please them.

和比自己年长一两代的人交谈，他们很可能会说，如今的孩子更加娇生惯养了。没有人愿意拥有或和那些要求过多、自私且被宠坏的孩子相处；当他们不能立即得到自己想要的一切时，就会变得脾气暴躁或闷闷不乐。矛盾的是，这类孩子的父母却错误地认为，

只要尽可能满足孩子的一切要求，孩子就会感到幸福，于是反而助长了这种索取无度的行为。短期来看，他们或许是对的。但从长远来看，这些孩子最终会变得孤独、依赖他人、长期不满，并对那些竭力取悦他们的父母心怀怨恨。

p-19-2 原文

Undoubtedly parents want to raise happy children who are confident, capable and likable rather than spoiled and miserable. One factor hindering this is that parents can't or don't spend enough quality time with their kids, and substitute this deficit with toys, games, gadgets and the like. Rather than getting material things, children need parents' devoted attention. The quantity of time spent together is less important than the content of that time. Instead of instantly satisfying their wishes, parents should help them work out a plan to earn things they'd like to have. This teaches them to value the effort as well as what it achieves.

毫无疑问，父母都希望把孩子培养成幸福、自信、有能力且讨人喜欢的人，而不是被宠坏又不快乐的人。阻碍这一目标的一个因素是，父母无法或没有花足够的高质量时间陪伴孩子，于是用玩具、游戏、电子设备之类的东西来弥补这一不足。孩子需要的不是物质上的东西，而是父母全心全意的关注。共同相处的时间长短并不如相处时光的内容重要。父母不应立即满足孩子的愿望，而应帮助他们制定计划，通过努力获得自己想要的东西。这能教会他们既重视努力本身，也重视努力所取得的成果。

Allow them to enjoy anticipation. Numerous psychological studies have demonstrated that children who learn to wait for things they desire are more likely to succeed in a number of ways later in life. One famous experiment in the 1960s involved 3- to 6-year-old children. They were given a choice between receiving a small reward, such as a cookie, immediately, or if they waited 15 minutes, they could have two. Follow up studies have found that those who chose to delay satisfaction are now more academically successful, have greater self-worth, and even tend to be healthier.

Don't say that you've moved around in jobs because you haven't found the right fit or feel that you were not challenged enough. Statements like these will make you sound aimless and lost. An interviewer may well think, why would this role be any different for you? You will probably leave here in six months. It also begs the question of what type of relationship you had with your manager. It doesn't sound like you had open communication with him or her. Managers usually love people who can self-sustain and enable growth through taking initiative, who are strong at following through their work, and who bring ideas and solutions to the table.

不要说你换过多份工作是因为一直没有找到合适的岗位，或者觉得自己没有得到足够的挑战。这样的说法会让你听起来漫无目的、迷失方向。面试官很可能会想：这个职位对你来说又会有什么不同呢？你大概六个月后就会离开这里。这也会让人不禁思考你和经理之间的关系如何。听起来，你似乎没有与他或她进行坦诚的沟通。经理通常很喜欢那些能够自我驱动、通过主动采取行动促进成长、善于把工作贯彻到底，并且能够提出想法和解决方案的人。

way towards suggesting that you might be the right person for the positionyou are applying for.

如果你曾担任管理或领导职位，在谈论当前职位时，绝不要把所有功劳或成就都归于自己。要突出你的团队，以及你是如何凭借他们的才能实现自己的愿景的。大多数成功的领导者都知道，自己的能力取决于团队的表现。在面试中承认这一点，将大大有助于表明你可能正是所申请职位的合适人选。

Lastly, have a good idea of what your role will be and try and convey the idea that you're flexible. Asking what your role will be suggests you will limit yourself purely to what is expected of you. In reality, your role is whatever you make of it. This is especially true in small companies, where the ability to adapt and take on new responsibilities is highly valued. And this is equally important if you're just starting out. Entry level interviewees would do well to demonstrate a broad set of skills in most interviews. It's important to have a wide skill set as many startups and small companies are moving really fast. Employers are looking for candidates that are intelligent and can quickly adapt and excel in a growing company.

最后，要清楚了解自己的职责，并努力传达出你具有灵活性。询问自己的职责是什么，会让人觉得你打算把自己严格限制在他人对你的期望之内。实际上，你的职责取决于你如何发挥。在小公司中尤其如此，因为适应变化并承担新的责任的能力备受重视。如果你刚刚开始职业生涯，这一点同样重要。对于初级职位的面试者来说，在大多数面试中展示广泛的技能组合会很有帮助。拥有多方面的技能非常重要，因为许多初创公司和小公司发展得非常快。雇主正在寻找聪明、能够迅速适应并在不断成长的公司中取得优异表现的候选人。

Questions 9 to 11 are based on the passage you have just heard.

The saying "blind as a bat" simply isn't correct. The truth is that all 1100 bat species can see and often their vision is pretty good, although not as excellent as other night-hunting animals.

p-9-2 原文

There are two main groups of bats, which are believed to have evolved independently of each other, but both from a common ancestor. The first group, known as the mega bats, are mostly medium-sized or large bats who eat fruits, flowers, and sometimes small animals or fish. These species have distinctive visual centers and big eyes. They use senses of vision and smell to capture their prey. For example, Flying Foxes not only see well during daylight, but can also distinguish colors. They actually rely on their daylight vision and cannot fly during the night with no moonlight.

蝙蝠主要分为两大类，据信它们是从共同祖先独立演化而来的。第一类被称为大蝙蝠，大多是中型或大型蝙蝠，以水果、花朵为食，有时也吃小动物或鱼类。这些物种拥有独特的视觉中心和大眼睛。它们利用视觉和嗅觉来捕获猎物。例如，狐蝠不仅在白天视力良好，还能分辨颜色。它们实际上依赖白天的视力，在没有月光的夜晚无法飞行。

p-9-3 原文

The second group, called micro bats, are smaller in size and mostly eat insects. These species use echolocation to find their way and identify food. Scientists have proven that despite their poorly developed small eyes, these bats still can see during the day. When we consider the nightly lifestyle of these bats, we will see they have to be sensitive to the changing light levels because this is how they sense when to start hunting. Moreover, vision is used by micro bats to travel over long distances, beyond the range of echolocation.

第二类被称为小蝙蝠，体型较小，主要以昆虫为食。这些物种利用回声定位来辨别方向和识别食物。科学家已经证实，尽管这些蝙蝠的小眼睛发育较差，但它们在白天仍然可以看到。当我们考虑到这些蝙蝠的夜间生活方式时，就会发现它们必须对光线强度的变化保持敏感，因为它们正是以此感知何时开始捕猎。此外，小蝙蝠还利用视觉进行长距离飞行，超出了回声定位的范围。

So the truth is, there are no bats which are naturally blind. Some species use their sense of hearing more than their eyes as a matter of adaptation to a particular lifestyle, but their eyes are still functional.

This is to teach children a lesson at the end of the program. Educational shows have pro-education and pro-social goals. However, conflict between characters is often depicted with characters being unkind to each other or they may use

emotionally aggressive tactics with each other. Preschool children reallydon't get the moral of the story. That's because it requires that theyunderstand how all the parts of the show fit together. You need prettycomplicated cognitive skills and memory skills to be able to do that. Theseare still developing in young children.

这种非预期影响与媒体对冲突的呈现方式以及学龄前儿童对冲突的理解方式有关。电视和电影制作者经常加入不良行为元素，以便在节目结尾教给儿童一个道理。教育类节目具有促进教育和促进社会性发展的目标。然而，人物之间的冲突通常被刻画为人物彼此不友善，或者彼此采用情绪性攻击手段。学龄前儿童确实无法理解故事的寓意。这是因为他们需要理解节目中的各个部分是如何相互联系、共同构成整体的。要做到这一点，需要相当复杂的认知能力和记忆能力，而这些能力在幼儿身上仍在发展之中。

However, parents shouldn't completely constrain children's viewing. Parents should instead watch with their kids and help them to understand the plot. Parents can comment along the way and then explain the message at the end. They should explain how certain types of behavior were not appropriate. This will help children interpret and get the message and help them learn to watch the show for those messages.

然而，家长不应该完全限制儿童观看电视。相反，家长应该陪孩子一起观看，并帮助他们理解情节。家长可以在观看过程中发表评论，然后在结尾解释其中传达的信息。他们应该说明某些行为方式为什么是不恰当的。这将帮助儿童理解并领会节目传达的信息，也帮助他们学会关注节目中的这些信息。

While it has long been a practice in Asian countries, many people in Western countries have yet to embrace the no-shoes-in-the-house rule. For many in those countries, wiping their shoes before going inside is regarded as sufficient. After all, they may think a little dirt doesn't hurt anyone. But I can give you several good reasons why people should remove their shoes before going inside their homes.

虽然在亚洲国家，无鞋入室长期以来一直是一种习惯，但许多西方国家的人仍未接受在屋内不穿鞋的规定。对这些国家的许多人来说，进屋前擦擦鞋就被认为足够了。毕竟，他们可能认为一点灰尘不会伤害任何人。但我可以给你几个人们进屋前应该脱鞋的充分理由。

Bacteria are everywhere. They collect on your shoes when you walk along sidewalks, public toilet floors and even office carpets. In one study conducted at an American university, researchers collected microscopic germs from footwear. They found that up to 421,000 units of bacteria can collect on the outside of a single shoe. And it only takes a little bit of dirt to damage your timber floors. The more dirt you track in, the more it scratches and the more often you'd have to clean. The extra scrubbing will harm your floors over time. Shoes can also leave marks and scratches on floors, especially high heels or shoes with pointed or hard parts. These can dent and scratch your floor. And if you live in an apartment building, removing your noisy shoes is the polite thing to do out of consideration for your downstairs neighbors.

细菌无处不在。当你沿着人行道、公共厕所的地面，甚至办公室的地毯行走时，细菌会附着在你的鞋上。在一所美国大学开展的一项研究中，研究人员从鞋子上采集了微小的细菌。他们发现，单只鞋子的外部最多可以聚集421,000个细菌单位。而损坏木地板只需要一点点灰尘。你带进屋里的灰尘越多，地板受到的刮擦就越严重，你需要清洁地板的频率也就越高。额外的擦洗会随着时间的推移损坏地板。鞋子也可能在地板上留下痕迹和划痕，尤其是高跟鞋或带有尖锐、坚硬部件的鞋子。这些鞋子会使地板凹陷并留下划痕。而且，如果你住在公寓楼里，考虑到楼下邻居，脱掉发出声响的鞋子是一种礼貌的做法。

Walking around with bare feet is actually better for your feet. It strengthens the muscles in your feet. Though many people are accustomed to wearing shoes during all their waking hours, the more time you spend wearing shoes, the more likely you are to incur foot injuries as a result.

实际上，赤脚走路对你的双脚更有益。它能增强脚部肌肉。尽管许多人已经习惯在清醒的所有时间里都穿鞋，但你穿鞋的时间越长，就越有可能因此受到足部伤害。

And if people aren't yet convinced by my arguments, I can give one final reason. The dust and toxic chemicals you bring into your house via your shoes can deteriorate the air quality in your home. Toxic chemicals are everywhere in our lives: insect-killing chemicals used on public grass areas, cleaning chemicals on the floors of public areas. By kicking off your shoes before you enter the home, you are denying entry to these harmful chemicals.

如果人们还没有被我的论据说服，我还可以给出最后一个理由。你通过鞋子带进屋里的灰尘和有毒化学物质会降低家中的空气质量。有毒化学物质遍布我们的生活：公共草地上使用的杀虫剂，公共场所地面上的清洁剂。进屋前脱掉鞋子，就能阻止这些有害化学物质进入室内。

Emotions are an essential and inseparable part of our consciousness. They are part of a built-in mechanism, which allows us to cope with the ups and downs of our lives both physically and mentally. When we hide our emotions and our true feelings, we stop being genuine, spontaneous and authentic in our relationships. When we put on cultivated and polished faces in the company of others, we stop being true to ourselves. Socially, it may be a

good tactic to hide our true emotions, but morally it is also a breach offaith and trust. Although humans are more advanced and intelligent, animalsare more genuine and authentic in their behavior and responses than humanbeings. The more educated we are, the less transparent and reliable webecome. We are drawn to our pets because pets do not lie.

情绪是我们意识中不可或缺且无法分割的一部分。它们是与生俱来的机制的一部分，使我们能够在身心两方面应对生活中的起起落落。当我们隐藏自己的情绪和真实感受时，我们在与他人的关系中便不再真诚、自然和真实。当我们在他人面前摆出经过刻意修饰和精心打磨的面孔时，我们便不再忠于自我。从社会角度看，隐藏真实情绪可能是一种有效的策略，但从道德角度看，这也违背了信任和诚信。尽管人类更加先进、更加聪明，但动物在行为和反应上比人类更加真诚、更加真实。我们受教育程度越高，就越不透明，也越不可靠。我们会被自己的宠物吸引，是因为宠物不会撒谎。

One of the first steps in dealing with emotions such as anger or fear is to acknowledge them as normal and human. There is nothing sinful or immoral about being emotional, unless your emotions make you inhuman, insensitive and cruel to others. Feelings of guilt associated with emotions are more devastating and damaging than the experience of emotion itself. So when you deal with the problem of emotions, you should learn not only how to control them but also how to accept them and manage the guilt and anguish arising from them.

处理愤怒或恐惧等情绪的第一步之一，是承认它们是正常的人类情感。情绪化本身没有任何罪恶或不道德之处，除非你的情绪使你变得不人道、麻木不仁并且残酷地对待他人。与情绪相关的内疚感，比情绪本身的体验更具破坏性，也更令人痛苦。因此，当你处理情绪问题时，不仅要学会如何控制情绪，还要学会如何接受情绪，并管理由此产生的内疚和苦恼。

Our brains are made up of a primitive inner core and a more evolved and rational outer core. Most of the time, the rational part of the mind controls the information coming from the primitive core and makes its own decisions as to what to do and how to respond. However, during critical

situations, especially when a threat is perceived, the outer core losescontrol and fails to regulate the impulses and instinctual responses comingfrom the primitive brain. As a result, we let disturbing thoughts andemotions arise in our consciousness and surrender to our primitive behavior.

我们的大脑由一个原始的内部核心和一个进化程度更高、更具理性的外部核心组成。大多数时候，心智中理性的部分会控制来自原始核心的信息，并自行决定该做什么以及如何回应。然而，在关键情境下，尤其是在察觉到威胁时，外部核心会失去控制，无法调节来自原始大脑的冲动和本能反应。结果，我们让令人不安的思想和情绪进入意识，并屈从于原始的行为方式。

In times of emotional turmoil, remember that emotions arise because your senses are wired to the primitive part of your mind which is self-regulated, autonomous and spontaneous. Your rational mind does not always deal with the messages coming from it effectively. These messages are part of your survival mechanism and should not be stifled simply because emotions are unhealthy and betray your weaknesses. When emotions arise, instead of stifling them, pay attention to them and try to understand the messages they are trying to deliver. This way you make use of your emotions without losing your balance and inner stability.

在情绪动荡时期，请记住，情绪之所以产生，是因为你的感官与心智中那个具有自我调节能力、自主性和自发性的原始部分相连。你的理性思维并不总能有效处理来自这一部分的信息。这些信息是你生存机制的一部分，不应仅仅因为情绪不健康、会暴露你的弱点，就被压抑。当情绪出现时，不要压抑它们，而要关注它们，并努力理解它们试图传达的信息。这样，你就能利用自己的情绪，同时不失去平衡和内在的稳定。

Good morning, class. My topic today is how to feed a hungry world. The world's population is expected to grow from 6.8 billion today to 9.1 billion by 2050. Meanwhile, the world's population more than doubled from 3

billion between 1961 and 2007. Simultaneously, food production has beenconstrained by a lack of scientific research. Still, the task of feedingthe world's population in 2050 seems easily possible.

What is needed is a second green revolution. This is an approach that is described as the sustainable growth of global agriculture. Such a revolution will require a wholesale shift of priorities in agricultural research. There is an urgent need for new crop varieties. They must offer higher yields but use less water, nitrogen-rich fertilizers or other inputs. These new crops must also be more resistant to drought, heat and pests. Equally crucial is lower-tech research into basics such as crop rotation and mixed farming of animals and plants on small farms.

我们需要的是第二次绿色革命。这是一种被称为全球农业可持续增长的方式。这样的革命需要彻底改变农业研究的优先事项。人们迫切需要培育新的作物品种。这些品种必须提高产量，同时减少对水、富含氮的肥料或其他投入品的使用。这些新品种还必须更能抵抗干旱、高温和害虫。同样重要的是开展技术含量较低的研究，探讨作物轮作以及小农场中动植物混合养殖等基础问题。

Developing nations could score substantial gains in productivity by making better use of modern technologies and practices. But that requires money. It is estimated that to meet the 2050 challenge, investment must double to 83 billion US dollars a year. Most of that money needs to go towards improving agricultural infrastructure. Everything from production to storage and processing must improve. However, research agendas need to be focused on the needs of the poorest and most resource-limited countries. It is there that most of the world's population lives and it is there the population growth over the next decades will be the greatest.

发展中国家可以通过更好地利用现代技术和生产实践，大幅提高生产率。但这需要资金。据估计，为应对2050年的挑战，投资必须翻一番，达到每年830亿美元。其中大部分资金需要用于改善农业基础设施。从生产到储存和加工的各个环节都必须得到改进。然而，研究议程需要着眼于最贫困且资源最有限国家的需求。世界上大多数人口生活在那里，未来几十年人口增长最为迅速的地方也在那里。

To their credit, the world's agricultural scientists are embracing such a broad view. In March, for example, they came together at the first Global Conference on Agricultural Research to begin working out how to change research agendas to help meet the needs of farmers in poorer nations. But these plans will not bear fruit unless they get considerably more support from policy-makers.

值得肯定的是，世界各国的农业科学家正在采取这样广泛的视角。例如，今年3月，他们齐聚首届全球农业研究大会，开始研究如何改变研究议程，以帮助满足较贫困国家农民的需求。但是，除非得到政策制定者大力增加的支持，这些计划将不会结出成果。

The growth in public agricultural-research spending peaked in the 1970s and has been shrinking ever since. The big exception is China, where spending has far surpassed other countries over the past decade. China seems set to transition to become the key supplier of relevant science and technology to poorer countries. But developed countries have a humanitarian responsibility too. Calls by scientists for large increases in the appropriation of funds for public spending on agricultural research are more than justified.

公共农业研究支出的增长在20世纪70年代达到顶峰，此后一直在缩减。中国是一个明显的例外，过去十年中，中国的相关支出已经远远超过其他国家。中国似乎将转型为向较贫困国家提供相关科学技术的主要供应者。但发达国家同样负有提供人道主义援助的责任。科学家们呼吁大幅增加公共农业研究支出的拨款，这一要求完全合理。
